

Course: Air Regi app for Reverie Emporium Designer/ Translator: Danielle Le Sage	Tester's Name: Operating System: Browser: Browser Version:
---	--

Information	
Introduction:	Purpose of RLO: The purpose of this course was to help train new staff for the register, and before they get in-store training. It is also meant to be used as a reference. The RLO is for making monetary transactions on the register app.
RLO Objectives:	Learners will be able to perform transactions involving cash, credit card, and cashless payment (AirPay and PayPay).
Target Audience:	<p>This course is intended for new shop staff in our store and temporary staff working in our sales booth at events. They usually have some prior experience in retail. We hire people from many different nationalities and backgrounds, not just Japanese, to help us at the shop. Most staff can either speak and/or read Japanese to some degree. This will also be useful for those looking to review and refresh their knowledge of certain processes on the application.</p> <p>Primarily to be used on iPad's or iPhones. Other types of PCs are fine.</p>
Knowledge Check Strategies:	<p>Learners will do and learn through sequencing activities in the end of most tutorials and then be able to advance on in the course.</p> <p>Final knowledge check is where the learner will have to choose the best answer from a situation. The correct answer is the right action to take in that given situation.</p>
Seat Time of RLO	5 -10 minutes. It is self-paced so they can take what they need or go through it thoroughly.

RLO Opening Instructions
<p>Open from zipfile (LMS SCORM 1.2) Unzip to your hard drive and find the story.html file</p>

Usability Test Questions

Visual Design:	<ul style="list-style-type: none">-Are the images helpful? Are there enough images, and if not, where should they go?-Is the arrangement of text distracting or helpful in how it is arranged? Is the text organized and chunked appropriately?-Are the layers working properly or are they blurry?-How is the visual literacy within slides generally? Can you easily understand what you looking at?
Navigation:	<ul style="list-style-type: none">-Is navigation clear and easy to find? What do you click to navigate?-Do the navigation buttons work as they should?
Knowledge Checks:	<ul style="list-style-type: none">-What do you have to do for the sequencing activity?-Does it work?-Can you clearly understand what to do for the final knowledge check?-Do you think the activity is appropriate for the information given?
Organization:	<ul style="list-style-type: none">-Does the flow of information logical and easy to follow?-What and where are the branching scenarios?
Accessibility :	<ul style="list-style-type: none">-Are the colors and contrast appropriate and everything legible?-Is font size appropriate and consistent?-Are things worded simply and clearly enough?- What do you have to do to get the audio?-Any other comments about accessibility?
Overall design and comments:
